Strong focus

**Consistently
developed.
Rigorously
tested.**

We are a small team of functional software enthusiasts dedicated to providing efficient program solutions with a strong focus on user experience. Our shared vision for privacy, software stability, and grass-roots solutions motivates us, and our community to continue to push forward our endeavors.

Modern design

An app that truly looks at home on your desktop. It follows the modern design guidelines for Windows 11.

Open source

Freely available source-code strengthens the community through trust and transparency. Most of our

Native app

We did not take the easy path of writing our app in Java or a web-based Javascript heavy framework.

including transparency effects, animations, and both light and dark themes.

Screenshots

software is released under the MIT license.

Source Code

Using C# and .NET allows us to craft an experience that minimizes resource use and is very fast.

Meet Playbooks. Drag. Drop. Run.

Build your own configuration for AME Wizard with Playbooks, a modular extension format containing simple YAML instructions to be applied. Verifying your Playbook allows you to build a trusted userbase. You can also browse the growing list of Playbooks offered by talented creators for free.

AtlasOS

Windows, redesigned specifically for gaming.
Tweaked to improve your experience.

AtlasOS is a verified Playbook.

Powerful toolset

Gone are the days of custom ISOs. Quickly build and deploy any configuration to Windows you can think of.

- ➔ Delete files with confidence
- ➔ Cleanly remove components
- ➔ Make powerful registry edits
- ➔ Full regex support for actions
- ➔ Install and deploy software
- ➔ Run custom scripts
- ➔ Modify the user interface

Windows catalogs certain system services and internal programs as components. AME Wizard will decrypt and enumerate the files and services contained by these components, providing an easy interface for their removal.

Due to its non-destructive nature, this process is distinctly different than force-deleting files, as it surgically removes components in their entirety.

Develop

Playbooks are YAML.

With human-readable configuration files, cleanly removing or modifying system components is as simple as listing their names in a list. Everything from the experience in the GUI, including requirements to check for, before the user can proceed, to modifying the user interface and installing packages, is just a few lines of text away.

```
---
```

```
title: Components
description: Remove certain windows components
privilege: TrustedInstaller
actions:
  - !run:
    exeDir: true
    exe: "ONED.bat"
    weight: 20
  - !registryKey:
    path: "HKCU\Software\Classes\CLSID\{018D5C66-4533-4A04-BB0E-000000000000}"
  - !registryKey:
    path: "HKCU\Software\Classes\WOW64Node\CLSID\{018D5C66-4533-4A04-BB0E-000000000000}"
  - !file:
    path: "%windir%\System32\OneDriveSetup.exe"
  - !file:
    path: "%windir%\SysWOW64\OneDriveSetup.exe"
  - !file:
    path: "%windir%\SysWow64\OneDriveSettingSyncProvide...
```

Development kit

**Look complicated? We get you,
that is why we are working on a
GUI Playbook development kit!**

Features

**Verify.
Deploy.
Trust.**

All verified Playbooks are hashed upon importing them into AME Wizard, and are checked against a fast, location optimized hash verification server.

Verified Playbooks are always delivered securely to their userbase.

Verification

Verification requires registration of your project with Ameliorated. We audit your Playbook, verify it, and you are added to a whitelist of secure Playbooks.

Registration is closed during beta

[Become verified](#)

Verified features

With verified Playbooks, users are able to enjoy a much more secure and integrated experience. Check for updates and download them seamlessly via the Wizard UI, once the Playbook has been imported once. All verified Playbooks are clearly marked as such in the Wizard UI, communicating trust and authenticity to users. This also includes space for adding links to external websites and resources, such as donation pages or support articles.

Different applications

A powerful multi-tool:
For hobbyists and organizations.

Absolute Privacy. Unrivaled Stability.

Our custom Playbooks aim to not only showcase the power of AME Wizard, but are a carefully crafted gift to the enthusiast community we are a part of. Being functional software enthusiasts has constantly motivated us to improve and tweak the operating systems that we use. Enabling true privacy and maximizing stability are at the core of this philosophy, and Ameliorated Playbooks specifically target these goals through an intensive and transformative new process.

AME Playbooks

A number of years ago, this project began as a collection of scripts, which required the users to run a deletion process via Linux. We have learned much since then, and the move to Playbooks is the next chapter in delivering the AME experience.
